

Experiment No. 10

Aim: To implement programs based on PyQt5 with Event Listening

Dialog

Username:-

Password:-

Gender:- ☐ Male ☐ Female

Language:- ☐ English ☐ Marathi ☐ German

Code:-

```
from msilib.schema import RadioButton
```

```
from PyQt5 import QtWidgets, uic
```

```
def cal():
```

```
    v1 = call.textEdit.toPlainText()
```

```
    print("Name:", v1)
```

```
    v2 = call.textEdit_2.toPlainText()
```

```
    print("Age:", v2)
```

```
    if call.radioButton.isChecked():
```

```
        v7 = call.radioButton.text()
```

```
        print("Gender:", v7)
```

```
    else:
```

```
        v7 = call.radioButton_2.isChecked()
```

```
        print("Gender:", v7)
```

```
    print("Language:", end="")
```

```
    if call.checkBox.isChecked():
```

```
        v3 = call.checkBox.text()
```

```
        print(v3, end=" ")
```

```
    if call.checkBox_2.isChecked():
```

```
v4 = call.checkBox_2.text()

print(v4, end=" ")

if call.checkBox_3.isChecked():

    v5 = call.checkBox_3.text()

    print(v5, end=" ")

app = QtWidgets.QApplication([])

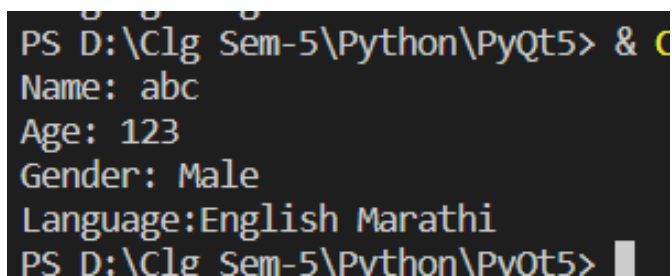

call = uic.loadUi("Login.ui")

call.pushButton.clicked.connect(cal)

call.show()

app.exec()
```

Output:-

```
PS D:\Clg Sem-5\Python\PyQt5> & C
Name: abc
Age: 123
Gender: Male
Language: English Marathi
PS D:\Clg Sem-5\Python\PyQt5>
```
